

Rhine-Main-Observatory

Stefan Stoll

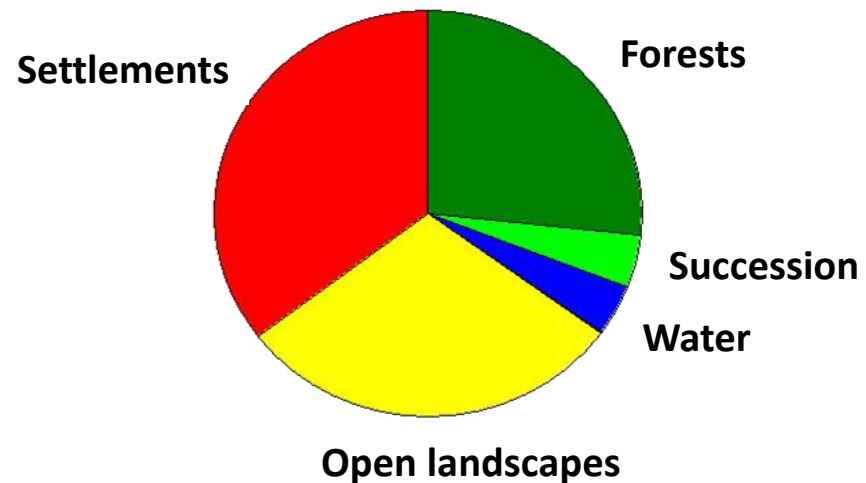

Rhine-Main-Observatory

- 100 km² core area
- Permanent sampling plots
- Gelnhausen / Institute
- Central weather station

Design of the Rhine-Main-Observatory

Land use:

1. Rivers and their floodplains
2. Settlement areas

These habitat types are underrepresented in current long-term research programs.

Monitoring program

Biotic components (permanent):

- river macroinvertebrates

- vascular plants

- carabid beetles

- spiders

Biotic components (campaigns):

- terrestrial molluscs

- wood louses

- fish

...

Monitoring program

Biotic components (permanent):

river macroinvertebrates

vascular plants

carabid beetles

spiders

Monitoring program

Biotic components (permanent):

river macroinvertebrates

vascular plants

carabid beetles

spiders

Databases

FENA: amphibians, reptiles, fish,
butterflies, bats, dragonflies,...

HLUG: river macroinvertebrates,...

=> We constantly try to enlarge
taxonomic range, update datasets

Amphibians

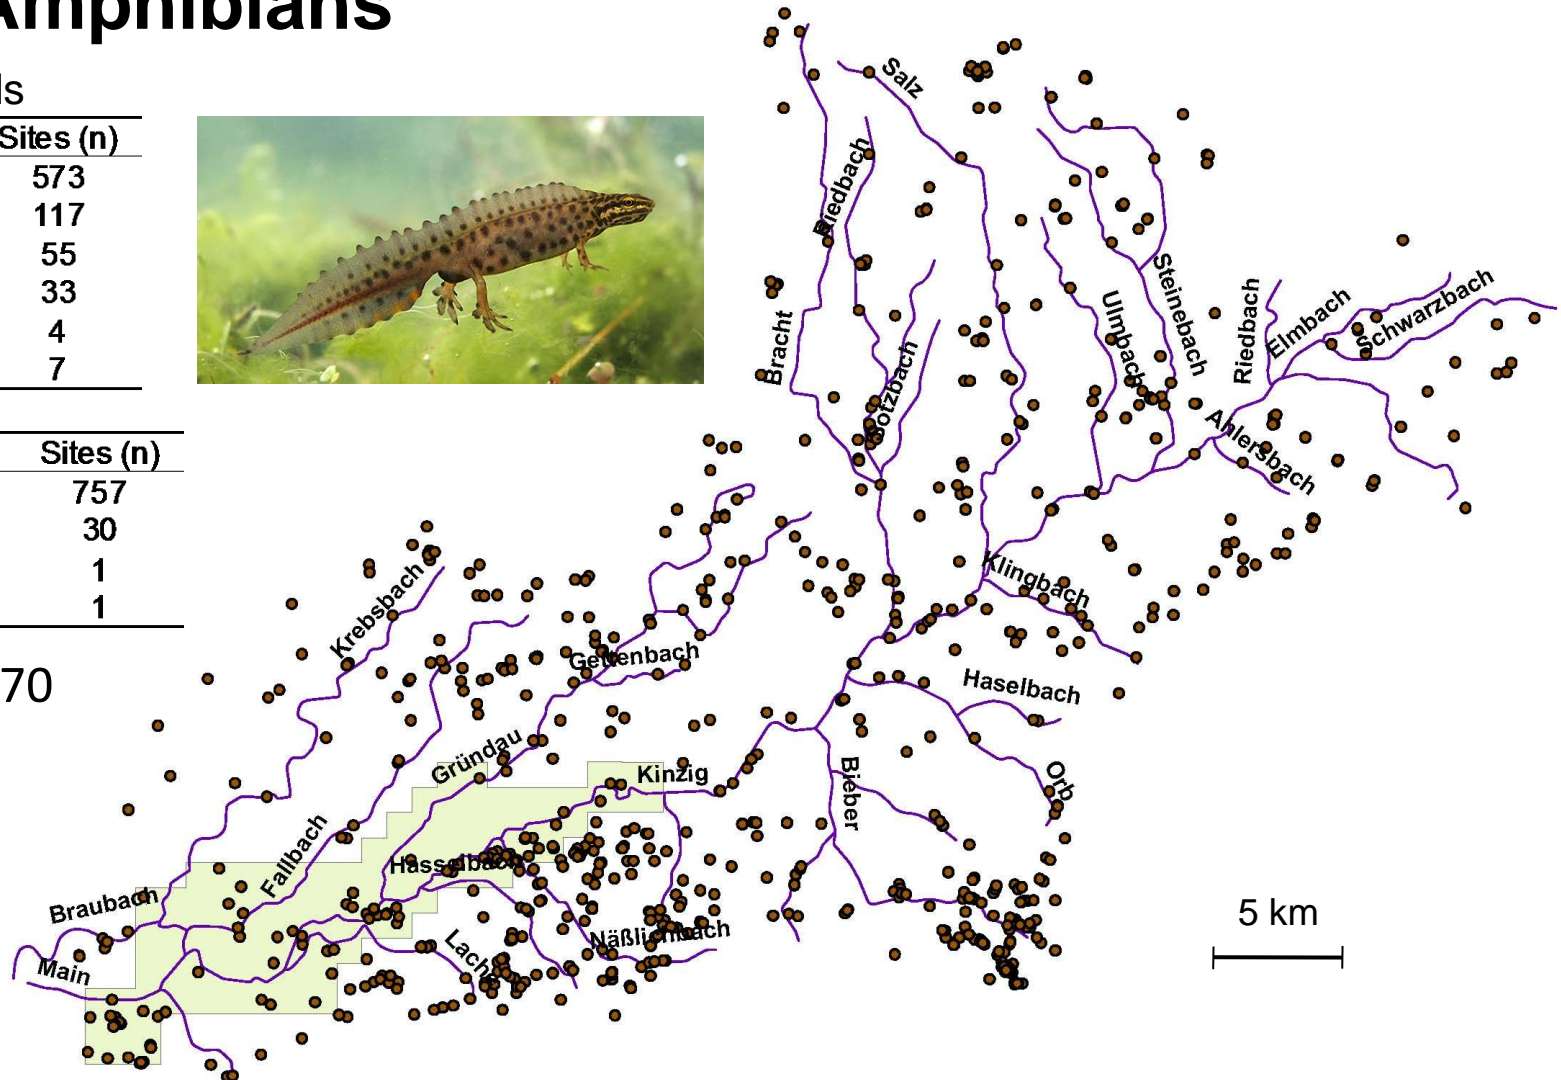

789 records

Years (n)	Sites (n)
1	573
2	117
3	55
4	33
5	4
10	7

Decades (n)	Sites (n)
1	757
2	30
3	1
4	1

since 1970

Monitoring program

Abiotic components (permanent):

Land use

Meteorological data

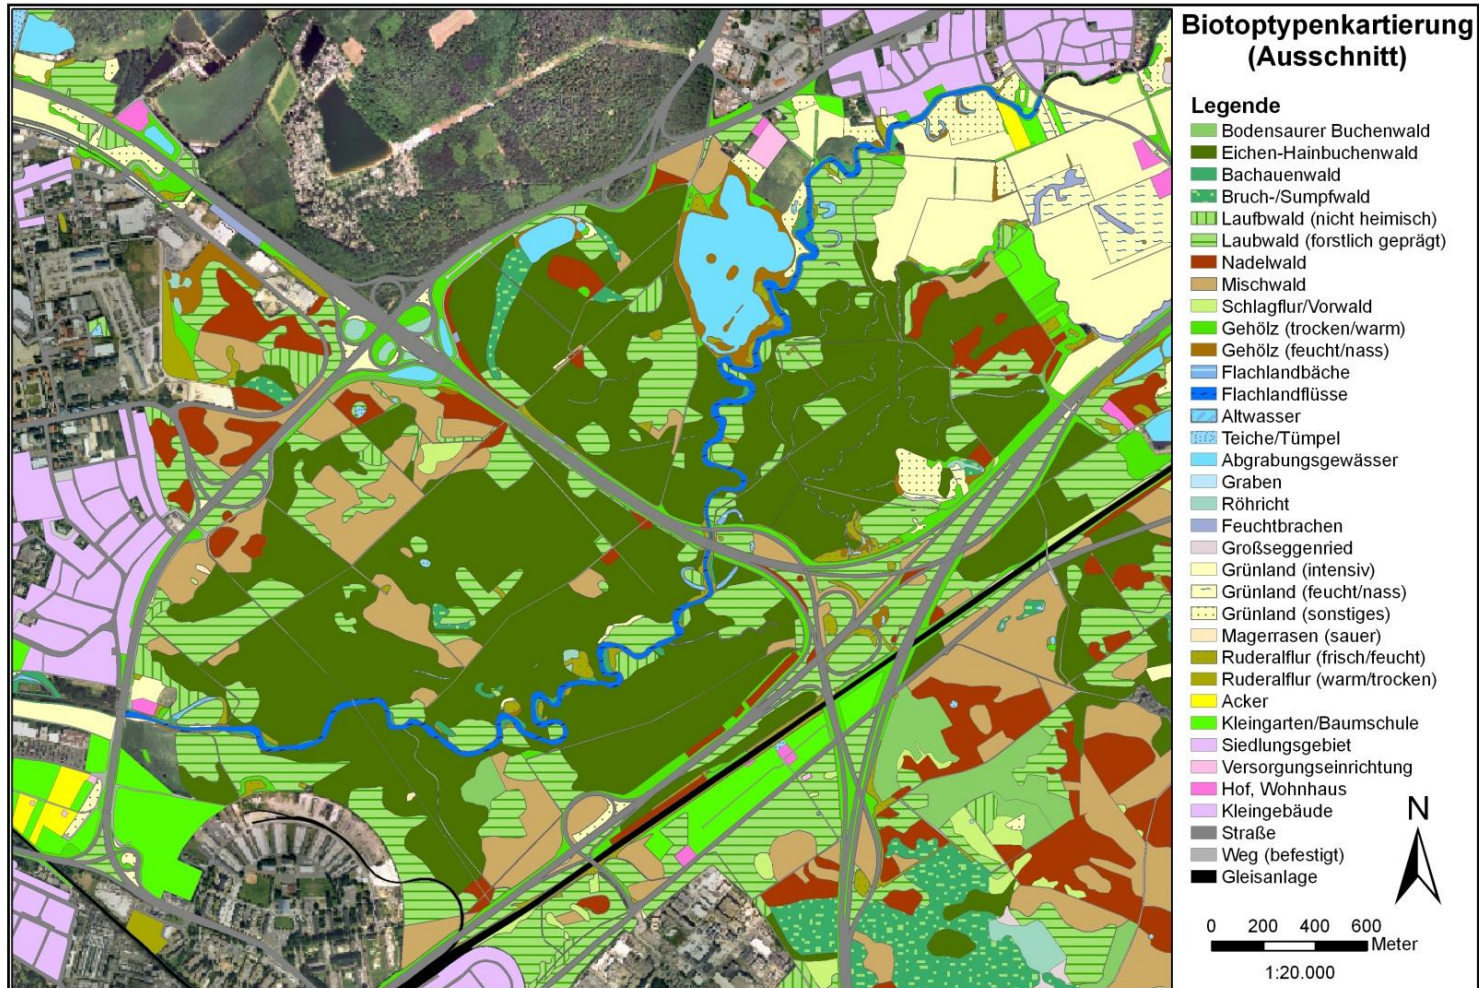

Hydrological data

Physico-chemical data

Monitoring program

Land use

Monitoring program

Abiotic components:

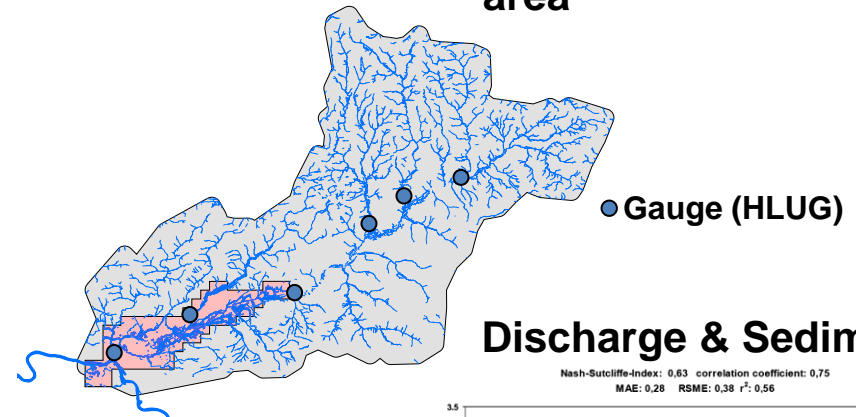

Land use

Meteorological data

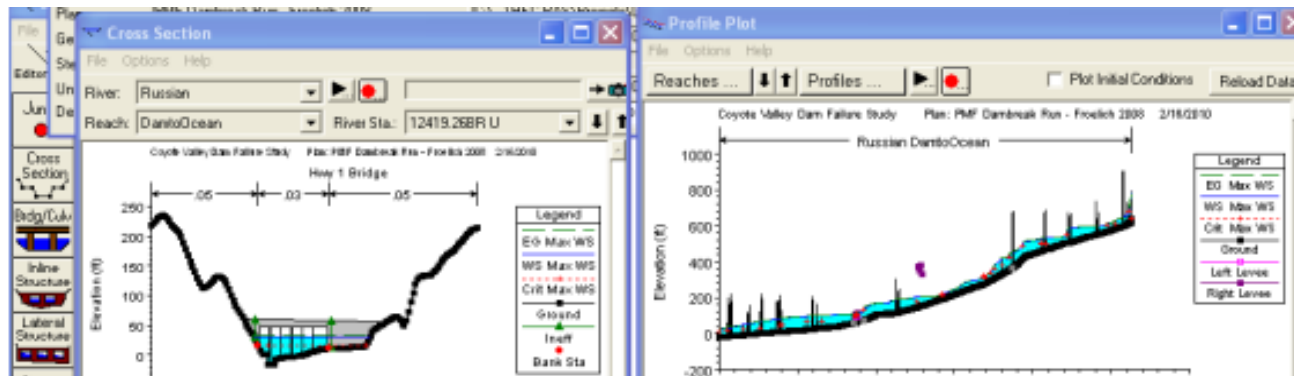

Hydrological data

Physico-chemical data

Processes in catchment area

Discharge & Sediment

Processes in river (1D, 2D)

Water depth, Current velocity, Substrate distribution, Temperature

Monitoring data

Data:

Data has been stored centrally on server as access-database, excel, txt-files,...

mySQL-database for monitoring data has been programmed, is currently filled with monitoring data

Data collected in the context of the LTER project „EnvEurope“ is available online via the EnvEurope database

Metadata:

Site metadata and metadata on datasets is available via DEIMS

LTER Germany is currently preparing a „monitoring of monitoring database“
MoMo => overview of long-term monitoring data in public administration

Environmental quality and pressures assessment across Europe

EnvEurope

- **Aim:** Development of a common strategy for cross-ecosystem comparison of monitoring data based on the LTER-Europe network.
- **17 partner institutionen in 11 countries:** Austria, Bulgaria, Finland, Germany, Hungary, Italy, Lithuania, Poland, Romania, Spain, Sweden
- **Duration:** 01/01/2010 - 31/12/2013
- **External partners of Senckenberg:** FZ Jülich, ZALF, Uni Rostock, Uni Kiel

Major products of EnvEurope

ECOPAR => interactive web tool (database/wiki) to identify / comment / discuss best parameters and monitoring techniques in environmental long-term monitoring.

Monitoring goals: assess ecosystem integrity and ecosystem services

DEIMS => (I)LTER metadata- and database. Find information about long-term monitoring & long-term monitoring data in the LTER community.

More details: Johannes

EnvThes => Thesaurus for environmental data. Common language enables easy keywording and search for data.

More details: Johannes

Areal assessment and comparison of ecosystem services

SENCKENBERG

EU BON WP5

Task 5.1 In situ testing of EU BON information services through researchers and stakeholders

- contribute experience from previous data integration initiatives

Task 5.2 Testing EU BON tools for data analysis and interpretation

- lead by SGN
- co-operation with WP3 and 4
- application of Kinzig models: up-/downscaling; enhanced distribution models; building scenarios, risk assessment

Task 5.3 Testing EU BON services for management, decision makers and stakeholders: applications across different scales

- provide scenario outputs from Kinzig model (e.g. endangered/alien species)

Task 5.4 Networking and expanding EU BON sites and acquiring additional support

- proposal in ERAfrica call
- contact to LTER-Europe
